

Now, create your own website!

● **Ayushi Agarwal**
New Delhi, May 11

THIS SUMMER vacation, here is an opportunity for you to do something all by yourself.

Get acquainted with web designing with WebsiteForever; a programme that allows you to create a website of your own in not more than three steps.

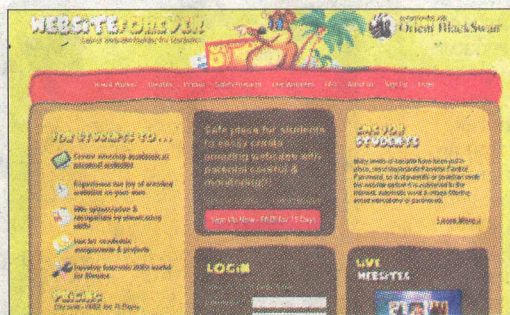

The programme, which has been developed by the Orient Blackswan Private Limited in collaboration with Akmin Technologies, has been re-designed with safety features such as parental control password, and automatic and manual scanning of text and pictures uploaded to prevent any wrong usage.

"We launched the website two years ago. The students now have an opportunity to be creative and upload their own content," said Mukul Sahgal, vice-president, School Division, Orient Blackswan Private Limited.

With user-friendly tools one can create multiple pages, upload pictures, animations, get hit counters, feedback forms, and date and time stamp, among others.

Akash Prashant, a student of Class 9, Schram Academy, Maduravoyil, Chennai, said: "I have created a website on my favourite poets. Creating my own web pages wasn't difficult at all. I selected a design template, modified the colour schemes, allotted names to the web pages and www.favoritepoets.websiteforever.com was created, my own lifelong website."

The website can be created not only for personal purposes but for academic assignments as well. "Students can create their projects and upload

them on their website and thus, present the same to the teachers," added Sahgal.

"Working on WebsiteForever will upgrade my web and computer usage skills. This will certainly give me an edge over others when I step out of school," said Sayan Sidha Das, student of Class 11, DPS, Sushant Lok, Gurgaon. To know more log on to www.students.websiteforever.com.
